

# Water quality in the main waterways in Oslo

The numbers are in EQR which stands for Ecological Quality Ratio which is a quality coefficient for a given waterway. EQR is the coefficient between an observed value for a given parameter, and the value of the natural state for the same parameter. You can read more about EQR at [vannportalen.no](http://vannportalen.no).

EQR is divided in 5 categories:

Very good: >0,98 EQR, Good: 0,86–0,98 EQR, Moderately good: 0,74–0,86 EQR, Poor: 0,62–0,74 EQR, Very Poor: <0,62 EQR.
