The graph shows the number of transgressions of the 24 hour limit value of PM10 (particulate matter smaller than 10 micrometres) in Oslo. The limit value for PM10 is 50 µg/m³ (measured as an average over 24 hours), this limit should not be transgressed more than 30 days per year. Data points marked with (*) have less than 80 % data coverage, or were out of service during that period, and as such cannot be directly compared with the other data points. Data source: NILU.
