Transgressions of the 8 hour average of Ozone in Oslo

The graph shows the number of days with Ozone (O3) concentrations over 120 µg/m3 (measured over an 8 hour period), and should not be exceeded more than 25 days per year. Data points marked with (*) have less than 80 % data coverage, or were out of service during that period, and as such cannot be directly compared with the other data points. Data source: NILU.
